A Kimley-Horn Pavement Management Solution

Spend less time trying to manage and fix costly pavement repairs and more time planning future improvements with **Kimley-Horn's easy-to-use pavement asset management tool.**

**DRIVE™** is a web-based solution to help you manage and customize your pavement data, so you can apply the most cost-effective solution to the right pavement at the right time.

**DRIVE™** makes it quick and easy to:

- + Display pavement and asset data using geospatial mapping technology
- + Reduce total life cycle costs through data-driven rehabilitation plans
- + Yield predictability in repair costs to allow for more accurate annual budgeting
- + Develop an implementable and integrated pavement maintenance and rehabilitation plan
- + Navigate the dashboard for simple communication of needs to decision-makers

Left untreated, pavement conditions get worse over time. If you aren't 100% sure of your assets and their condition, let us help. Reach out to one of our pavement professionals today and learn how Kimley-Horn's **DRIVE™** solution can help maximize your time and budget.
