

What is SMARTS?

Kimley-Horn's data management platform, SMARTS, puts you back in control of all your site's projects and programs.

SMARTS ends information overload. Project Managers collaborate with colleagues and Kimley-Horn partners to:

- View, add, and edit data through a web browser.
- Create consistent reports for all stakeholders with a click.
- Assign tasks and automate notifications.

KEY BENEFITS

Gain new control

of your projects with nationwide visibility and drilldowns to each site.

Save time

with easy data entry and task assignments.

Align

partners and consultants with a single source of current data.

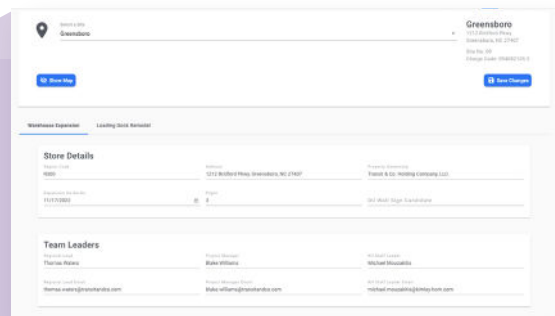

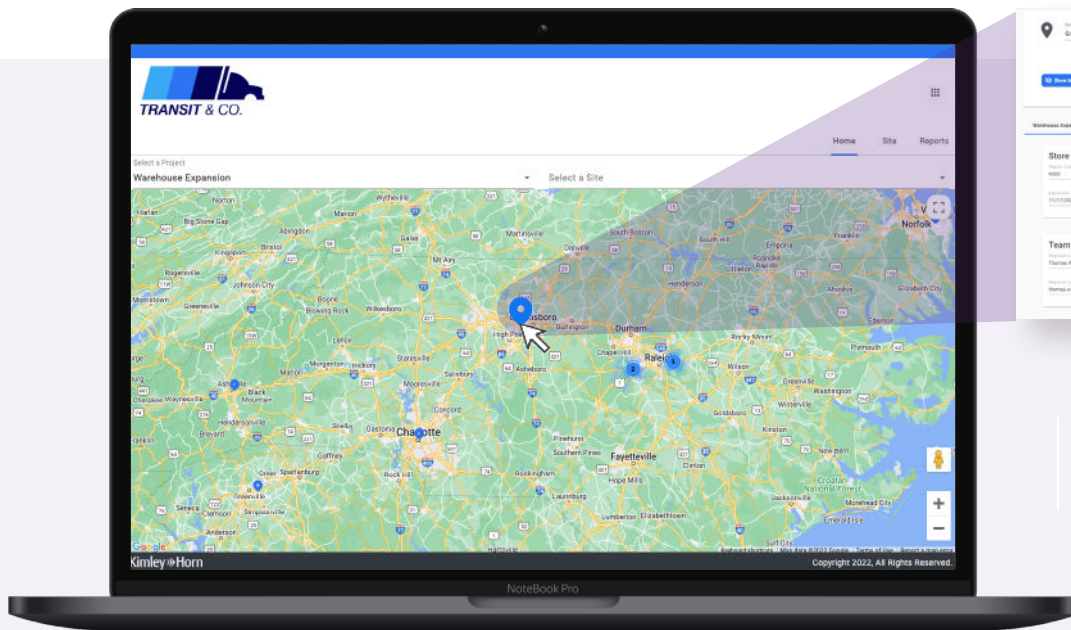

Meet deadlines

by flagging urgent actions and automating notifications.

UNITE DISPARATE DATA

SMARTS stores, organizes, and filters data previously stored in silos across people and programs. Now, all users have transparency to the latest:

- Land survey information
- Geotech data
- Property management files
- Maps and Google Earth files
- Spreadsheets
- Documents
- Calendars

Centralize data for many site locations and access detailed information for each site.

“

We can't even compare you to other consultants. Your **level of organization, proactiveness, and communication** was exactly what we needed.
